

Name: _____

Perception Puzzle

Across

- 4. Factors target motion, sound, size.
- 5. stereotyping judging someone based on which group they belong
- 6. perception : process of selecting, organizing, and interpreting sensory information sensation : detecting stimuli in the immediate environment selection : using certain stimuli to further process, and not others Organization : placing stimuli into a framework for storage Translation : stimuli is interpreted and given meaning Perceptual Grouping : grouping similar stimuli into a meaningful and recognizable pattern Person Perception : making judgement about others Halo effect : drawing general impressions about someone due to single characteristics stereotyping : judging someone based on which group they belong to Contrast effect : evaluating one's characteristics that are affected by comparisons with other people recently encountered who rank higher or lower on the same characteristics projection : give another one's own characteristics Selective perception : people interpret what they see on basis of stereotyping Perceptual organization : organizing stimuli into meaningful patterns Figure-ground illustration : organization of the visual field into objects that stand out from their surroundings Perceptual Process : consists of sensation, selection, organization, and translation Attribution theory : observable behavior is either internally or externally caused (study) Affects the perception : experience, interests, expectations Situation factors : time, work, social setting Factors target : motion, sound, size, similarity Consistency : the individual always behave in such a
- 8. selection using certain stimuli to further process, and not

- 9. Organization placing stimuli into a framework for
 - 10. Person Perception making judgement about
 - 13. Halo effect drawing general impressions about someone due to single
 - 14. Selective perception people interpret what they see on basis of stereotyping Perceptual organization organizing stimuli into meaningful
 - 16. Affects the perception experience, interests,
 - 17. perception process of selecting, organizing, and interpreting sensory information sensation detecting stimuli in the immediate
 - 18. Figure-ground illustration organization of the visual field into objects that stand out from their
- Down**
- 1. Consistency the individual always behave in such a
 - 2. projection give another one's own
 - 3. Perceptual Grouping grouping similar stimuli into a meaningful and recognizable
 - 7. Contrast effect evaluating one's characteristics that are affected by comparisons with other people recently encountered who rank higher or lower on the same
 - 11. Perceptual Process consists of sensation, selection, organization, and translation Attribution theory observable behavior is either internally or externally caused
 - 12. Translation stimuli is interpreted and given

- 15. Situation factors time, work, social
