

Peridontal Implants

Across

3. Material left behind that may hamper implant
 6. Recommended every 12 months
 7. Good indicator of current tissue inflammation
 10. A titanium post that attaches to the implant body and protrudes partially or completely through the gingival tissue
 11. Used to clean dental implant
 12. Powder used with air polisher around implants

15. Plaque biofilm-induced inflammation of the soft tissues around an implant

16. What an implant replaces
 17. Risk factor affecting prognosis of an implant
 20. Accepted by the body

Down

1. A nonbiologic device
 2. Force which could damage an improperly placed implant
 4. Direct contact of the living bone with the surface of the implant body

5. Chronic periodontitis affecting the soft and hard tissues surround a functioning osseointegrated dental implant
 8. Union of the epithelial cells to the abutment or implant surface
 9. Causes inflammation
 13. The portion of the implant system that is surgically placed into the living alveolar bone
 14. Metal used to instrument implants
 18. Best indicator for diagnosis of implant failure
 19. Device that sits on top of the implant
