

Permanent Waving #2

Across

- 5. Perm wrap in which one end paper is folded in have over the ends like a envelope
- 7. chemical bonds that join amino acids together, end-to-end in long chains.
- 9. Hair service that cause a chemical change that alters the natural wave pattern of the hair.
- 10. The most common reducing agent in permanent wave solutions

Down

- 1. Stops action of a permanent wave solution and rebuilds the hair in its new curly form
- 2. Base control in which the hair is wrapped at 45 degree below the center off the base section.

- 3. A two step process whereby the hair undergoes a physical change caused by wrapping the hair on perm rods.
- 4. Perm rods that have a smaller diameter in the center that increases to a larger diameter on the ends.
- 6. Tool that is usually about 12inches long with a uniform diameter along the entire length of the rod.
- 8. Strong chemical bonds formed when the sulfur atoms in two adjacent protein chains are joined together
