

Physical Science Vocabulary

Across

- 1. A chemical symbol
- 3. When something goes wrong during a experiment
- 6. A substance that is dissolved in a solvent
- 9. The latin name for iron
- 10. The other part of a answer
- 13. A weak bond

- 14. A liquid substance capable of dissolving other substances
- 15. A molecule that has slight positive and negative charges

Down

- 2. Molecules with no polarity
- 4. When the surface of a liquid can resist tension

- 5. The use of electricity to break a molecule down into smaller units
- 7. Water that has a certain dissolved ions in it
- 8. When a substance is dissolved in a liquid
- 11. Very inefficient and expensive reactors
- 12. The phenomenon that occurs when individual molecules are strongly attracted to each other
