# Physical and Chemical Changes and Properties Vocab

## Across

6. how close together molecules of a substance are
7. change in size, shape, form, or state of matter which the matter's identity stays the same
8. characteristic of matter that can be observed as it changes to a different type of matter
10. characteristic used to describe something

## Down

1. the resistance of fluid to flow

2. the gradual destruction of an object by chemical reactions w/ environmental factors
3. characteristic of matter that you can observe or measure without changing the identity of the matter
4. change in matter which the substances that make up the matter change into other substances with new chemical and physical
5. characteristic of matter that you can observe or measure without changing the identity of the matter
9. how easily a substance undergoes a chemical reaction
