

# Plant Cell

## **Across**

**3.** has ribosomes in the membrane that makes protein ; delivers protein lipids and other compounds to the cell

**6.** where ribosomes are made

**8.** package and ship out materials

**9.** to keep the cell organelles in place

**11.** breaks down toxic chemicals ; delivers protein lipids and other compounds to the cell

**12.** changes light energy and CO<sub>2</sub> to food for the cell

## **Down**

**1.** contain/keep safe genetics material (DNA)

**2.** changes oxygen into energy for the cell

**4.** forms the structure of the cell

**5.** put together the building blocks of the cell

**7.** to let stuff in and out of the cell

**10.** stores lipids
