# Plant Cells

## Across

- 5. Transports proteins from the ER to other parts of the cell
- 9. Control center for the cell. Contains DNA.
- 10. Everything in the cell or a liquid.
- 11. Controls all passing of materials in and out of the cell. This part holds in the internal parts

- 12. Involves the production of chromosomes, composed of proteins and DNA

## Down

- 1. Where proteins are made in the cell
- 2. Produces Glucose during photosynthesis.
- 3. Produces Energy for the cell

- 4. Provides the Strength and shape of the cell.
- 6. Vesicles that provide storage of water and other minerals
- 7. Provides protection and has rigid structures
- 8. Vesicles that break down other materials
- 13. Passageway or Transports proteins within the cell
