

# Plant Reproduction

## Across

- 5.** The female reproductive organ of a flower
- 6.** The part of the female reproductive organ that catches the pollen for fertilisation
- 9.** The transfer of pollen from one flower to the stigma of another flower of the same species
- 10.** A \_\_\_\_\_ seed has two cotyledons
- 11.** The location of the male gamete

## Down

- 1.** The part of the seed that forms the shoot

- 2.** These hang outside the flower of wind pollinated flowers to allow the wind to pick up the pollen
- 3.** The male reproductive organ of a flower
- 4.** The part of the seed that forms the root
- 7.** An insect pollinated flower produces small amounts of sticky \_\_\_\_\_ that will stick to the insects body
- 8.** No petals are a feature of \_\_\_\_\_ pollinated flowers
