

Plant and Animal Cells

Across

- 2. Contains chlorophyll and is where photosynthesis occurs, only found in plant cells
- 8. The network of channels within the cytoplasm that moves materials from place to place within the cell
- 9. Pack proteins and other materials to ship out of the cell
- 10. This cell is more box-like than the other one
- 13. Stores food, water, and waste
- 14. Provides structure and support, only found in plant cells
- 15. Control/ comand center of the cell?

17. The animal cell has the larger vacuole, true or false

Down

- 1. Bean-shaped organelle that provides energy and is the powerhouse of the cell
- 3. You can find ribosomes in the E.R. and around the cytoplasm, true or false
- 4. These are found inside the nucleus and they contain DNA
- 5. This cell does NOT have a cell wall or chloroplasts
- 6. The mitochondria is usually represented with a _____

7. These make mprotein molecules

- 11. Surrounds the cell and decides what materials enter and leave the cell
- 12. Chromosomes always come in _____
- 16. Jelly-like substance that fills the cell and cushions the organelles
