

Name: _____

Date: _____

Plants

Across

- 2. What is used to transport food from the leaves to the rest of the plant?
- 6. What are tiny pores that control gas exchange and water loss?
- 9. What gas is required for photosynthesis to occur?
- 10. What is the process that plants undergo to obtain energy from the food they produce?

11. Photosynthesis converts _____ into chemical energy

12. Where does photosynthesis take place?

Down

- 1. These types of plants do not contain xylem and phloem and must obtain water and nutrients directly from the environment and distribute cell to cell?
- 3. Where does respiration occur?

4. The process plants undergo to make their own food?

5. What is the process that plants use to get rid of most water through leaves?

7. What is used to transport water and minerals from roots to the rest of the plant?

8. What gas is produced in photosynthesis?
