

Plants and Animals

Across

- 6.** Takes in carbon dioxide and give off oxygen through photosynthesis
- 10.** Both plants and animals can be produced this way
- 12.** Transport substances between roots and leaves
- 13.** Diffusion Of water
- 14.** Sperm producing organ
- 15.** Flowered plants
- 16.** How many phyla of plants are there

- 17.** Conduct water and has continuous subsystems
- 18.** Complex mixture of sand, silt, clay, air, decaying animal and plant tissues

- 19.** movement of pollen
- 20.** What two ways plants grow

Down

- 1.** Area where cells growing and maturing
- 2.** Contains a cell wall and chloroplasts

- 3.** Animals that don't make their own food are called
- 4.** Area where cells mature and take on specialized functions
- 5.** Contains more than one cell
- 7.** Actively dividing Cells
- 8.** Loss of water through leaves
- 9.** Sporophyte tissue(ovule not enclosed)
- 11.** Where do plants get their energy from
