

# Plate Tectonics

## Across

- 4.** A crack in earths crust  
**5.** The theory that continents gradually move over time  
**10.** A scientist that came up with the theory of continental drift  
**12.** He believed that every continent was once joined together  
**14.** Plates move towards each other  
**16.** A shaking of the ground near Faults  
**17.** One of the most well known supercontinent

**18.** The layer between the earths core and the crust

**19.** Where two different plates interact with eachnother

**20.** Underwater mountains that are formed by tectonic plates

## Down

**1.** A large part of the land that is lifted by convergent plates

**2.** What land first formed from

**3.** The theory that a large part of the earth crust moves on the mantel

**6.** When a plate goes under another tectonic plate

**7.** Plates that pull apart

**8.** New crust that forms from underwater volcanoes

**9.** Plates that slide past each other

**11.** A large piece of land

**13.** A mountain that shoots out lava

**15.** Molten rock that comes from earths core
