# Product Design

## Across

3. Used to cut wood in a straight line
4. Used to cut fabric or to score tougher material
6. Used to wear down material or to give a smoother finish to a product
8. Used to protect the wearer's eyes
9. Used to apply force to a nail when joining two bits of wood together, and can be used to remove nails from wood by using the claw
10. Used to cut wood in a curved line

## Down

1. Used to heat up a stick of glue which then becomes applicable to stick two or more objects together.
2. Used to electronically connect wires in a circuit by melting solder (a metal)
5. Used typically to add force to a chisel in order for it to break up the material
7. Used to drill a circular hole through material
