

Psychology Vocab

Across

- 3.** A research procedure in which both the data collectors and the research participants do not know the expected outcome of the experiment.
- 7.** In an experiment, a variable other than the independent variable that could produce a change in the dependent variable.
- 11.** A research technique that compares individuals from different age groups at one time.
- 12.** The tendency to focus on information that supports preconceptions.

Down

- 1.** A research project strategy that investigates the degree to which two variables are related to each other.
- 2.** Observing and recording behavior in naturally occurring situations without manipulating or controlling the situation.
- 4.** An explanation of the exact procedures used to make a variable specific and measurable for research purposes.
- 5.** A research technique that follows the same group of individuals over a long period.

- 6.** A method of learning about the world through the application of critical thinking and tools such as observation, experimentation, and statistical analysis.
- 8.** A research technique in which one person is studied in depth in the hope of revealing universal principles.
- 9.** A tendency for research participants to behave in a certain way because they know they are being observed or they believe they know what the researcher wants.
- 10.** An inactive substance or condition used to control for confounding variables.
