Name: _____   Date: _____

Quadrilaterals & Measurements

Across

2. A 4-sided flat shape with straight sides where opposite sides are para

5. A trapezoid in which non-parallel sides and base angles are equal

9. distance around a two-dimensional shape

11. Parallel sides of a trapezoid

12. A shape with straight sides that has an opposite pair of sides that are parallel

13. A 4-sided flat shape with straight sides where all interior angles are right angles (90°).

15. The center of a circle connecting two points on the circumference

16. Is an angle inside a shape.

Down

1. A 4-sided flat shape with straight sides where all sides have equal length.

3. The distance around the edge of a circle

4. A segment that connects the midpoints of the two non-parallel sides of a trapezoid

6. flat shape with 4 equal sides and every angle is a right angle (90°)

7. A straight line inside a shape that goes from one corner to another (but not an edge).

8. The size of the surface

10. Half of the diameters length

14. A 4 sided shape that has has two pairs of sides. • each pair is made of two adjacent sides that are equal in length
