

Quadrilaterals and Algebra

Across

1. An algebra sentence with an equals sign
5. A quadrilateral with opposite sides equal length and parallel, and all angles are 90 degrees
7. A four sided shape with any length sides and any size angles
9. An algebra sentence without an equals sign
11. A quadrilateral with two pairs of adjacent sides. Each pair of sides are equal in length. One pair of opposite angles are equal in degree

Down

2. A letter or symbol that stands for a number or a quantity that can change
3. A quadrilateral with opposite sides of equal length and opposite sides that are parallel
4. Lines that will never intersect
6. A quadrilateral that has only one pair of parallel sides. Sides can be any length
8. All sides are equal length and opposite sides are parallel; opposite angles are the same
10. A quadrilateral with all sides equal length and parallel and all angles are 90 degrees
