

Name: _____

Date: _____

ROCKS

Across

- 4. an extrusive rock that can take on many appearances
- 5. heavier than pumice, and darker because it contains more iron.
- 7. sedimentary rock that is formed from deposits of the remains of sea organisms such as shellfish and corals.
- 8. contains grains of different sizes that have been cemented together
- 10. a pale-coloured rock

Down

- 1. has grains slightly larger than those of mudstone.
- 2. common intrusive rock.
- 3. formed from the remains of dead plants that are buried by other sediments.
- 6. the powdery mark left by a mineral when it is scraped across a hard surface like an unglazed white ceramic tile
- 9. a smooth, black rock that looks like glass.
