Raptor puzzle

Across

- 2.** All raptors are known as _____, feeding on other animals.
- 4.** An animal that is active at twilight is said to be this.
- 5.** This is formed by raptors after consuming a meal and consists of the non-digestible parts of the food. It is then ejected out of the mouth.
- 7.** When two toes point forward and two backward, it is referred to as this:
- 11.** When a bird shakes out its feathers, it is relaxed and content -- this is known as a _____.

Down

- 1.** A raptor is said to have this kind of distribution if it ranges over high latitudes (think arctic).
- 3.** There are two species of this large raptor in Oregon, one of which is also found as far away as Mongolia.
- 6.** Swainson's, ferruginous and red-tailed are all examples of this (singular).
- 8.** A fish-eating raptor that is often seen nesting on platforms
- 9.** Raptor claw
- 10.** This 'ear tuft' of certain owl species is misnamed -- it neither assists in hearing nor is part of the ear.
