# Renewable Energy

## Across

5. Most types of renewable energy sources do not produce much of this
6. This machine harnesses energy from the Earth's winds
7. This type of machine/structure relies on tidal movement to spin underwater turbines to generate electricity
10. Many people think that these structures should not be built because they can spoil views of the countryside

## Down

1. A dam is used to hold water which can be released to run downhill to turn generators for this type of renewable energy source
2. This type of renewable energy relies on the sun
3. If structures are built to harness energy from this renewable energy source then wildlife habitats could be negatively impacted
4. This type of renewable energy is generated from warm rocks in the Earth's crust
8. This type of renewable energy source is obtained from plants and animals
9. What has to be present for solar panels to work
