Reproduction

Across

4. A sex organ present in males which is responsible for the production of sperm.

9. The part of the estrus cycle in which the ovaries release an ovum.

11. A muscular organ present in females which is the location of implantation of a fertilized egg and where it develops into a fetus.

12. The organs in which reproductive cells (sperm and egg) are produced. They are the testes in male and ovaries in female.

13. The process of giving birth.

14. The diploid cell resulting from the fusion of the sperm and oocyte.

15. The period when a female is receptive to mating.

16. Haploid cells used in sexual reproduction. They are mature sperm in the male and eggs in the female.

Down

1. Birthing difficulty

2. A temporary organ formed in females during pregnancy, which is responsible for nurturing the developing fetus, and removes waste products from the fetus.

3. A temporary body formed from a follicle after the release of an egg which releases progesterone.

5. Male steroid sex hormone

6. The hormone released by the corpus luteum which stimulates the uterus to prepare for pregnancy. During pregnancy, it is continued to be produced in high levels.

7. The time from one heat to the next.

8. Feeding extra feed to stimulate estrus and ovulation rates.

10. Animal, male, or female that donates gametes to be deposited in another animal.
