

Research Concepts

Across

6. The process by which participants are designated to groups to create a balance
11. The rigorous review process by which data from several quantitative studies are analyzed.
12. The type of validity that occurs when participants are lost.
13. Validity that applies to generalization of results
14. An error that most often occurs when the sample size is small.
15. The intervention that may be used with a control group

17. The variable that is manipulated

18. Research that includes qualitative and quantitative methods

Down

1. A term used for effectiveness.
2. Using measures that are reliable will help to reduce threats to ___ validity
3. The term that describes the expected outcome of a study
4. The threat that occurs when participants improve because of the attention received.

5. A type of validity that results with changes over time.

7. Research that attempts to capture subjective experiences.

8. The process in naturalistic inquiry of gathering data from several sources.

9. The variable that is measured

10. External events that can occur naturally that may influence a study outcome.

16. The method for keeping participants uninformed about the intervention
