

Research Methods

Across

- 7. scale that measures statements
- 9. questionnaires that are answered through questions or statements that allow them to answer it in their own words
- 11. guidelines for the use of animals and humans
- 12. an experiment that takes place in an artificial environment to the participants

Word Bank

- lab study
- dependent variable
- rating scale
- ethics
- repeated measures

- 14. when a participant takes place in all levels of the iv

Down

- 1. questions that are answered with a specific choice "yes" or "no"
- 2. when participants take place in one part if the iv
- 3. one of the main variables from #1 (the variable that psychologists decide to manipulate)

- field study
- closed questions
- opportunity sampling
- open-ended
- independent measures

- 4. recruited participants who happened to be around
- 5. scale that measures from 1-10
- 6. variable that psychologists decide to measure
- 8. study that takes place in ones own (natural) environment
- 10. participates who have an equal chance of being chosen
- 13. when researchers use a pre-existing iv

- natural
- likert scale
- independent variables
- random sampling
