

Research Methods

Across

2. What research approach focuses on quantitative data?
 4. Data that is accurate and genuine
 6. A written survey with standardised questions
 11. Which research approach uses elements of both positivism and interpretivism?
 13. E.g. picking names out of a hat
 14. Interpretivism uses mainly which kind of data?

16. A sample that accurately reflects the wider population
 17. The kind of data that interpretivism uses

Down

1. When the researcher doesn't inform participants in an observation that they're being watched
 3. Data that consists of numbers
 5. Picking participants that fit in a certain category

7. Using multiple methods to study the same topic
 8. Data that will be the same if the study is repeated
 9. Data already collected by someone else
 10. when someone's personal feelings or opinions influence their judgement
 12. Data that you collect yourself
 15. When the participants in an observation are aware that they're being watched
