

# Research Methods Revision

## Across

2. Experiment done in person's own environment  
 8. Term for participants in sample being typical of those in the target population  
 9. All the target population has an equal chance with this sampling method  
 10. Researchers manipulate this variable  
 11. Group of participants selected from target population for an investigation

12. Effect where repeated measures lead to learning, fatigue and boredom  
 13. Small scale trial run of investigation  
 14. Design using similar participants in each condition  
Down  
 1. Design where participants do every condition  
 3. Researchers measure this variable

4. Counteracting order effects by alternating participants with conditions  
 5. experiments look for a difference known as a cause and ...  
 6. Unwanted variables which should be controlled  
 7. Type of sampling, selecting participants available at the time
