

# Research Strategies

**Across**

**2.** a research technique that follows the same group of individuals over a long period

**8.** a sample that fairly represents a population because each member of the population has an equal chance of being included

**9.** a tendency for research participants to behave in a certain way because they know they are being observed or because they want to please the researcher

**10.** A research project designed to discover the degree to which two variables are related to each other

**11.** Compare people of different ages at one time

**12.** a research technique that questions a sample of people to collect information about their attitudes or behaviors

**Down**

**1.** a method of learning about the world through the application of critical thinking and tools such as observation, experimentation, and statistical analysis

**3.** A tendency to search for information that agrees with a preconception

**4.** Thinking that does not blindly accept arguments and conclusions

**5.** the entire group of people about whom you would like to know something

**6.** a research method in which the researcher manipulates and controls certain variables to observe the effect on other variables

**7.** Research technique in which one person is studied in depth in the hope of revealing universal principles
