

Resources in Earth's Systems

Across

- 3. natural resources humans use to make objects or to eat as food
- 4. plant matter, such as wood and crop waste, that is burned for heat
- 12. Earth system where rocks, minerals, and soil are found
- 13. Energy from the sun is absorbed and converted into electrical energy
- 14. naturally occurring inorganic solids

15. Earth system where living things are found

16. natural resource that can be replaced at the same rate it is used, or faster

Down

- 1. natural resource that cannot be replaced as quickly as it is used
- 2. Earth system where air is found
- 5. Natural resources that people use for energy
- 6. used by humans for survival and to improve quality of life

7. Water flows through a dam to turn blades of a turbine and generate electrical energy

8. Thermal energy that comes from deep within the Earth

9. Earth system where water is found

10. Made from the remains of once living plants or animals

11. Uses moving air to turn the blades of a turbine to generate electrical energy
