

Respiratory System

Across

2. tube composed of cartilaginous rings and supporting tissue that connects the lung bronchi and the larynx; provides a route for air to enter and exit the lung

4. located between the nasal conchae and the esophagus and trachea

5. The primary organ of the Respiratory system

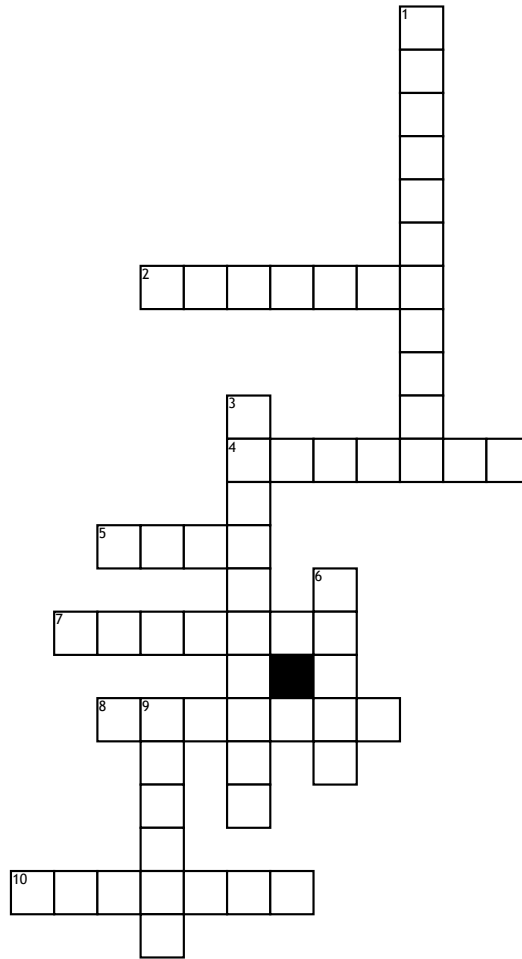

7. small, grape-like sac that performs gas exchange in the lungs

8. opening between the vocal folds through which air passes when producing speech

10. The Passageways that connect your windpipe to your lungs

Down

1. A system of the body used in breathing and include organs like the lungs, trachea and pharynx

3. piece of elastic cartilage that swings to close the trachea during swallowing

6. Plural form of cilium; lining of the epithelium

9. produces the voice, prevents food and beverages from entering the trachea, and regulates the volume of air that enters and leaves the lungs
