

Respiratory Unit

Across

2. This condition refers to the obstruction of the pulmonary artery by a blood clot.
3. Application of decongestants to the nasal tissues during epistaxis provide what action?
5. What breath sounds will you most likely hear on a patient with heart failure?
6. A clinical manifestation of TB.
7. . Contradiction to having an MRI performed includes which condition?
9. What is the critical factor that determines carbon dioxide movement in and out of the blood?
12. . This action increases pleuritic pain.
17. Identify a risk factor for acquiring TB.
18. This respiratory pattern is normal breathing, followed by varying periods of apnea.
19. This condition is a progressive respiratory disease of airflow obstruction.

20. What is a common trigger for asthma?

22. A first-line medication used in the treatment of TB.
23. A person with a tonsillar abscess experiences a severe sensation of burning and squeezing pain while swallowing known as what?
24. Instrument that measures the highest airflow during forced expiration?
25. This diagnostic test measures lung volumes, ventilator function and the mechanics of breathing.

Down

1. This medication is used to treat pleurisy.
4. This is seen when the patient uses shoulder movements to aid in breathing.
8. What is the priority action for someone that has a respiratory infection whose oxygen saturation is 90%?

10. This substance permits smooth motion between the two membranes (visceral and parietal pleura) of the lungs during respirations.
11. Respiratory pattern that alternate between deep and fast, with periods of apnea.
13. Increased CO₂ in the blood is called what?
14. The inability to breathe easily while laying flat is called?
15. What oxygen device is commonly used for patients with COPD?
16. This diagnostic test shows successive fine density layers of tissue to generate 3-D analysis of conditions such as pulmonary emboli.
21. A condition that leads to increased lung compliance is what?
