

Review 1

Across

- 1. Device that detects the light being released from the PSP plate during reading
- 3. _____ infections are hospital acquired
- 7. Layer in the PSP plate that sends light in a more forward direction when released in the reader is:
- 12. When x-rays strike a photostimulable phosphor material, _____ is released
- 13. An object that has been contaminated with a pathogenic organism is called:
- 14. The study of workplace injury prevention is called:

- 15. Quality _____ is defined as a systematic observation and assessment of different aspects of a radiology department.
 - 16. The exposure latitude of digital projection radiography responds in a _____ manner
 - 17. Under the system of protective precautions, the 'dirty' technologist touches the:
- Down**
- 2. The PSP plate is usually made of phosphors from what family group?
 - 4. Microorganisms that live on or inside the body without causing disease are called:
 - 5. Window level controls _____ of the image on the display

- 6. A device that absorbs x-rays and produces electrical charges is a:
- 8. A solid chemical element or compound doped with impurities that make it highly conductive is known as a:
- 9. Long-term radiation effects that are apparently random, and that have no threshold amount of exposure that must be received in order for them to occur are termed:
- 10. The arrangement of pixels in rows and columns is known as:
- 11. Medications that relieve pain without causing loss of consciousness are termed:
