

Review Ecology

Across

2. Type of organism that can make its own food by gathering sun's energy

5. the study of the interactions between living and nonliving things

9. All organisms that live in a place together with their physical environment (abiotic to biotic interactions)

10. A type of consumer that only eats meat (other animals)

13. Living things

14. smallest unit of organization in ecology focuses on a single organism

15. Type of organism that consumes both plants and animals

16. Another name for the levels in a food chain

Down

1. Organisms that break down the remains and other waste from organisms (helps recycle molecules into ecosystem)

3. visual representation that shows all possible feeding relationships in an ecosystem

4. visual representation that shows relative amount at each trophic level

6. A visual diagram that only shows a single path of energy flow in an environment

7. Type of organism that eat dead animals

8. Level of organization that looks at the interactions between different species

11. Non-living thing

12. Made up of all life on earth and all parts of earth
