# River processes

## Across

1. Pebbles bounce along the river bed
2. Stones knock into each other
7. The rock is dissolved
8. The force of the water
9. Large bedload rolls along
10. Sediment is dropped when flow decreases

## Down

3. When the bedload hits the bed and banks
4. Tiny sediment held in the water
5. The wearing away of the land
6. The material transported is called the...
