

# Rivers

## Across

2. when water turns into vapour
6. when rocks collide with each other and reduce their size
7. when large rocks are rolled along the river bed
8. when tiny pebbles are carried along by the river and seem to be bouncing

9. when the river loses its energy and drops its load

10. when sediment is moved

## Down

1. when water sinks into the soil

3. when water vapour is taken from trees

4. when small particles are carried along by the river

5. when water vapour turns into rain, snow, hail, sleet etc.
