

Rock/Water Cycle

Across

2. When lava/magma crystallizes

7. When magma cools underground

9. The process in which water travels from the Earth's surface to the atmosphere and back again

11. Rock made when layers of sand are pushed together

12. When water turn from a liquid to a solid

Down

1. When water changes from a solid to a liquid

3. Rocks that are made up of minerals and rock fragments

4. Water found on the Earth's surface

5. When rocks are exposed to extreme temperature and/or pressure

6. Rocks formed when sediment is deposited

8. When water turns into water vapor

10. Water that can not be absorbed into the ground
