

Rock Cycle

Across

3. Which layer is made up of a liquid iron and nickle?
 7. Which layer has the most density or thickest?
 8. What type of rock is formed by weathering and erosion?
 9. What is the inner core made of?

10. What type of rock forms from heat and pressure?
 11. These help the tectonic plates to move?
 12. The process by which sediments pile on top of each other?

Down

1. What type of rocks are formed by melting and cooling?

2. Which layer has the least density and the thinnest?
 4. Which layer is the hottest with the most pressure?
 5. The process where sediments become hard?
 6. How much do the plates move per year?
