

Rock Cycle

Across

1. the process by which a solid forms, where the atoms or molecules are highly organized into a structure known as a crystal

8. the process of eroding or being eroded by wind, water, or other natural agents

10. the action or process of changing in shape or distorting, especially through the application of pressure

11. make or become liquefied by heat

12. the process of settling or being deposited as a sediment

13. alteration of the composition or structure of a rock by heat, pressure, or other natural agency

Down

2. the geological process in which sediments, soil and rocks are added to a landform or land mass

3. the process in which sediments compact under pressure, expel connate fluids, and gradually become solid rock

4. wear away or change the appearance or texture of (something) by long exposure to the air

5. become or cause to become less hot

6. rocks having solidified from lava or magma

7. denoting rock that has undergone transformation by heat, pressure, or other natural agencies

9. rocks that has formed from sediment deposited by water or air
