

Rocks

Across

3. Sedimentary rock composed of sand sized grains made of silica, iron oxide and clay
 6. Sedimentary rock composed of calcite and dolomite
 9. Derived from clays and silts
 10. A naturally occurring solid aggregate of minerals and/or mineraloids.
 11. Consists mainly of clays and shales

12. A type of rock
 15. It is a variety of and stone composed of mainly granular quartz cemented by silica
 16. The scientific study of rocks
 17. Building stones obtained by quarrying
Down
 1. Consists of mainly quartz, feldspar, mica, and other coloured minerals
 2. Made of silica with smaller amounts of iron oxide and magnesium oxide

4. main ingredient is serpentine
 5. The earths outer solid layer
 7. Used mainly for paving stones and retaining walls
 8. Sediments deposited by the action of water or wind gets consolidated to rock
 13. A type of rock formed by magma
 14. Recrystallized limestone
