

# S.C.912.L.14.52(Organisms, Population and Ecosystem)

## Across

2. Organisms that change their internal conditions with the external conditions  
 3. Several populations of organisms living together in an area  
 4. Feed only on other animals  
 8. Interconnected food chains in a community food web  
 11. Feed on both plants and animals  
 12. Single pathway of feeding relationships  
 13. Break down dead organisms and recycle the organic molecules

14. The ability for an organism to adjust its tolerance level to abiotic factors  
 16. Species that have narrow niches  
 17. Several communities of organisms living in an area with similar environmental conditions  
 19. Living part of a habitat  
 20. Feed only on plants

## Down

1. A group of one species of organism living in an area  
 5. The range of resources it actually uses

6. Broadest level of organization including all life on Earth  
 7. includes precipitation, evaporation, and transpiration  
 9. The study of interactions between organisms and the living and nonliving parts of the environment  
 10. a single living thing  
 15. Seasonal movement of animals to more favorable habitats  
 18. Place where plant or animal lives
