

Name: _____

Date: _____

Schaffer and Emmerson- 1964

Across

6. The study had good _____

9. City that the study took place

10. Limitation is that the study had limited _____

11. Schaffer and Emerson concluded that attachment happens in _____ stages

13. Visited every _____ for the first year

14. Attachment stage that is 7-11 months, strong attachment to an individual, anxiety towards strangers and distress when seperated from specific adult

15. Conclusion= quality of _____ is important

16. Total number of babies that were visited in their homes

17. Attachment stage that is 9+ months, form many attachments & 18+ months 32% of babies had at least 5 attachments

Down

1. Limited sample size means that the results are not _____ to other social & histoical contexts

2. Strength of the study is down to how it was carried out (research design that involves repeated observations of the same variables)

3. The type of variable wasnt present due to the type of design they used

4. Attachment stage that is 6 weeks- 7 months, distinguish & recongine diffent people, accept confort from any adult & doesnt show seperation/ stranger anxiety

5. Many developmental theories that identify a sequence of qualitatively different behaviours that are linked to specific ages

7. How Schaffer & Emerson collected their results (method in which person is asked to state or explain their own feelings, opinions and behaviours)

8. Conflicting evidence came from a psychologist in 1969

12. Attachment stage that is 0-3 months, behaviour to human & non-human is the same
