

Science 10 - Sustainability Unit

Across

2. A species close to extinction.
 5. A step by step sequence linking organisms that feed on each other.
 7. An organism that uses photosynthesis to make its own food.
 9. A producer.
 13. A species no longer exists.
 15. An animal that eats both plants and animals.
 16. A non-living factor in an ecosystem.
 18. A species likely to become endangered if factors that make it vulnerable are not reversed.

19. A representation of the feeding relationships among organisms in an ecosystem.

20. The collection of all the populations of different species within an ecosystem.

Down

1. An organism that eats only plants.
 3. An organism that eats other plants or animals for its survival.
 4. An animal that feeds on other animals.
 6. A defined area containing a variety of species of organisms.

8. A species that is not in immediate danger of extinction but is at risk because of declining numbers.

10. The conditions required for the survival of a species.

11. A living factor in an ecosystem.

12. A species no longer exists in part of its range.

14. Waste from plants and animals.

17. An organism that feeds on the waste from plants and animals.
