

Science Equipment

Across

2. Bunsen burners should only ever be lit when placed on one of these for safety

3. used to for heating a solution to remove the liquid, leaving the solid as crystals

8. used when removing solid particles from a liquid or solution

9. used for heating small amounts of a substance or for a small scale chemical reaction

10. this has 3 legs and holds another vessel above a Bunsen burner for heating

11. measures volumes of liquid accurately

13. comes in various sizes to contain and pour liquids

Down

1. this holds other equipment in the correct position above the desk

4. This is used to measure temperature

5. named after its shape; larger scale chemical reactions are carried out in these

6. used to evenly mix chemicals in a liquid or solution

7. this burns gas and is used for heating.

12. placed on top of a tripod so that the vessel above does not fall through; this spreads heat
