

Science Vocab

Across

- 1. stress that pulls something apart
- 3. The downward vertical motion of Earth's surface
- 11. parallel forces acting in opposite directions
- 14. Squeezing stress
- 15. When large regions rise vertically with very little deformation
- 16. Where tectonic plates slide horizontally past each other and form faults

- 17. Parallel ridges that form where blocks of crust move up or down along faults
- Down**
- 2. The equilibrium between the continental crust and the denser mantle below it
 - 4. layers of rock that are folded
 - 5. A deep, underwater troughs created by one plate subducting under another plate at a convergent plate boundary
 - 6. An area of many fractured pieces of crust along a large fault

- 7. A curved line of volcanoes that forms parallel to a plate boundary
- 8. Flat regions with high elevations
- 9. Areas of subsidence and regions with low elevation
- 10. A change in the shape of rock caused by stress
- 12. An extensive area of level or rolling land
- 13. The upward vertical motion of Earth's surface
