

Science Vocabulary: Set 4

Across

- 4. Energy that comes from changing the power of moving air into a useful form
- 5. The dropping off of sediments in a new place
- 10. The protection of animals, plants, and natural resources; the careful use of natural resources to prevent them from being lost or wasted
- 12. A steep valley formed by weathering and erosion, usually by water
- 15. To produce something or cause something to be produced
- 16. A natural structure on Earth's surface
- 18. Hills formed by wind blowing and depositing sand

19. The breaking down of rock on Earth's surface

- 20. The shaking of Earth's crust
- 22. Carbon-based fuel made from recently produced biomass

Down

- 1. _____ Energy: a renewable source of energy based on the natural movement of water
- 2. An area of low land with sediment deposit between branches at the mouth of a river
- 3. Small piece of weathered rock
- 6. The natural movement of air that can change Earth's landforms
- 7. _____ Energy: energy produced by means other than the burning of fossil fuel

- 8. _____ Resources: materials from Earth that can not be replaced within a reasonable amount of time, such as oil, coal, and natural gas
- 9. _____ Energy: energy that comes directly from the sun
- 11. Frozen water that can change Earth's landforms
- 13. A huge piece of ice
- 14. _____ Resources: materials from Earth that can be replaced by nature within a relatively short period of time
- 17. _____ Energy: energy that comes from the natural heat inside of the Earth
- 21. The movement of sediments
