

Science Vocabulary

Across

1. The gas form of water
5. When water vapor changes to liquid
8. Layer directly above Troposphere
14. When a warm air mass meets two cold air masses and is pushed out of the way
16. Starts at 80km and ends at 800km; contains ionosphere
17. Layers
18. Tells you which way the wind is blowing
19. Winds that flow from east to west
21. What is it called when water falls from clouds onto Earth's surface?

22. Is something you need to breath
23. When a fast moving warm air mass meets a slow moving cold air mass
24. An instrument for measuring the humidity of the air or a gas
25. As sunlight enters the atmosphere, that is converted to infrared radiation

Down

2. What is in the stratosphere?
3. When a cold air masses collides with a warm air mass
4. What instrument is used for measuring wind speed?
6. A storm with a violent wind

7. What instrument measures the amount it has rained?
9. Measures the amount of heat in atmosphere
10. The degrees of something; How hot something is or how cold something is
11. When liquid water changes into water vapor
12. When evaporation happens in plants
13. The movement of water
15. An overflowing of a large amount of water
20. An instrument for measuring air pressure
