

# Science power

## Across

2. In living things the process of repairing injured cells or growing lost body parts

4. In a cell nucleus a threadlike structure that carries genetic materials

11. In cells the process that releases food energy

12. The process by which a protein attaches to a substance

13. Allowing materials to pass

14. Eith of the two new cells formed by the process of mitosis and cell diviso

## Down

1. The process by which a cells nucleus division to form two

3. In living things cells having different structures and appearances and performing different functions

5. Allowing no materials to pass

6. In living things the process of repairing injured cells or growing lost body parts

7. In a cell membrane a protein that controls the passage of substances into or out of a cell

8. Allowing certain materials to pass

9. The diffusion of a solvent selectively permeable

10. The movement of particles in liquids and gases
