

Seed Producing Plants

Across

- 2. Plant tissue specialized for mitosis
- 7. Process that draws in water for the plant
- 9. A cone producing tree
- 10. Cells on the inside of the vascular cambium form this tissue
- 11. Specializes in places where there is little water (i.e. a cactus)

Down

- 1. Transports water and nutrients throughout the plant
- 3. Produces seeds covered by protective tissue
- 4. The release of water into the air spaces between leaf cells
- 5. Produces "naked seeds" that are directly exposed to the air
- 6. Plant that lives in the water
- 8. Has fibrous roots
