

# Sensation Perception #2

## Across

7. Cue using one eye to determine depth perception

9. Parts of the brain that are responsible for processing specific visual information

10. Property where stimuli that are near each other tend to be grouped together

## Down

1. binocular cue that uses both eyes to compare images and determine depth perception

2. when part of a stimulus stands out against the background

3. Ability to judge distances

4. principle that states we tend to group things together that have same properties

5. Tendency to see as figure as whole, even if it is not completely connected

6. principle that states the perceived size of an object remains the same, despite changes in the retinal image

8. German word that means whole
