# Soil and its Uses Matching

- |  |                    |
|--|--------------------|
| 1. Good soil that crumbles easily                                      | A. Mantle          |
| 2. Determined by the size of the mineral particles within the soil     | B. Crust           |
| 3. The part of the world not covered by the oceans                     | C. Soil texture    |
| 4. Process of loosening and redistributing particles                   | D. Plate Tectonics |
| 5. Involves the chemical alteration of the rock                        | E. Land            |
| 6. Results from physical forces that reduce the size of rock particles | F. Erosion         |
| 7. The crust and solid outer mantle are known as                       | G. chemical        |
| 8. Outer portion of the mantle   | H. Lithosphere     |
| 9. Layer that makes up the majority of the Earth                       | I. Friable         |
| 10. Solid covering over the underlying mantle                          | J. Mechanical      |
