

Solar System

Across

1. This planet is The biggest planet, and has a 9.9 hour rotation.

3. This is keeping us warm today, and is a star.

8. This is composed of rock and metals.

10. This planet has the fastest resolution, and is 0.39 astronomical units from the sun.

12. This originates from the cold Kuiper belt and orbits around the sun.

13. This is mostly made up of hydrogen and helium.

14. This planet is Our home planet, and has a rotation of 356.25 days.

15. This planet is The hottest planet, and has a backward rotation.

Down

2. This is most likely the extinction of the dinosaurs.

4. This planet axis is tilted on its side, and rotates up and down.

5. This is most-likely a fragment of an asteroid or comet.

6. This Planet is the Windiest planet, and is the farthest planet from the sun.

7. This planet has the largest mountain in our solar system, and has water found in polar ice caps.

9. This began about 14 billion years ago and before this was only energy.

11. This planet has the most visible rings, and has a revolution of 29.46 years.
