

Solutions and Colloidal Dispersions

Across

- 2. extends throughout the system and surrounds the dispersed phase
- 5. homogeneous mixture of at least two substances
- 6. dispersed light particles large enough to scatter , or deflect ,visible light
- 7. a solution that contains all the solute that can be dissolved at a given temp.
- 8. fat globules are reduced to smaller , more equal , size and distributed evenly
- 10. dense cluster of ions or molecules

11. substance that is dispersed within another

Down

- 1. calculate and describe the concentration of a solution (commonly used)
- 3. affects the loss of vitamins and minerals when cooking
- 4. a solution that contains less solute than can be dissolved in it at a given temperature
- 9. movement of fluids through a semi-permeable membrane
