

Space

Across

2. An extremely large group of stars and planets
 6. Extremely small pieces of matter found in space
 11. A bright object in space that has a tail of gas and dust
 12. A mass of Rock that moves around in Space
 13. A lot of stars that are close to each other
 14. A star that unexpectedly becomes very bright and then returns its normal brightness over a period of time
 15. The star in the sky that provides light and warmth to the earth

Down

17. A Shooting Star
 18. The object similar to a planet that goes round the earth and that you can see shining in the sky at night
 19. A very small star that does not shine brightly
 20. A planet which is outside the earth's solar system

Down

1. A very large round object that moves around the sun or another star
 3. A Meteor that makes a line of light as it falls through the sky
 4. A large piece of rock from space that passes through the earth's atmosphere

5. A group of stars that form a particular pattern in the sky
 7. An area in outer space where the force of gravity is so strong
 8. The planet in which we live
 9. A very large hot ball of gas that appears as a small bright light in the sky at night
 10. A star and the planets that go round it,
 16. A very large cloud of dust and gas that exists in outer space
